Company Profile

First of all, thank you for choosing the products produced by Shandong Mingao Automobile Technology Co., Ltd. In the next daily life travel, Hope that the company's products will bring you unprecedented independence, comfort and ease!

The company was established in 2015 and has passed the EU CE quality system certification. It won the Excellent Modification Scheme Award in the Grand Prix Competition in 2020, won the Most Influential Channel Brand of Yasen Exhibition in 2021, and won the eighth in June 2021. Honorary certificate of the Golden Horse Award, won the utility model patent certificate in August 2021, won the AAA level of EU credibility in December 2021, became a member of the Automobile Dealers Chamber of Commerce of the All-China Federation of Industry and Commerce in January 2022, and was elected in June 2022 It is an excellent supplier for government procurement and a leader in China's automotive barrier-free products. It can provide customers with product research and development, production, system debugging and on-site services.

The company has hundreds of barrier-free products serving the 2021 Xi'an Games. During this period, it was recognized by the industry and received unanimous praise.

Main products: lift swivel seats, Wheelchair lifts, passenger seat lift-up model, wheelchair boarding guides, swivel seats, separate electric wheelchairs, assisted driving devices for disabled people, wheelchair fixing devices, seat quick release & fixing devices, wheelchair storage devices, etc. Use accessible products.

Product exports: Italy, Russia, the United States, Turkey, Saudi Arabia, India, Malaysia, Indonesia, Japan, South Korea, Thailand, Vietnam, South Africa and more than 10 countries and regions.

This manual can guide you how to install and debug the product. During your installation, if you have any questions, please contact us, we will provide you with timely and satisfactory solutions.

The description in this manual is for reference only. If there is any discrepancy with the product status, please refer to the actual product. If you have any questions about the manual or would like a copy, please contact our company.

Thank you again for choosing us and wish you a happy life!

Version number of this manual: V2.0.

Shandong Mingao Automobile Technology Co., Ltd.

Company Phone: 400-833-6602

After-sales phone: 18364060737

E-mail: Jonfeng@mingao.top

Address: Zhuoda Industrial Park, Changjiang East Road, Development Zone, Heze City, Shandong Province

1、 product statement

Mingao Technology guarantees to the original purchaser of the product that it will repair or replace any faulty parts due to material defects or workmanship problems free of charge during the product warranty period, as follows:

1.1 warranty period

- Warranty period: 12 months from the date of delivery by the supplier;
- Repair or replace any faulty parts due to defects in materials or workmanship during the warranty period;
- The parts that need to be replaced can be obtained by contacting our company;

1.2 After-sales service

- If there is a problem with the product, please contact our company in time (after-sales phone: 18364060737, 15701182765). Our company will analyze the cause of the problem within 24 hours and provide a solution to the problem. If the problem is caused by material defects or workmanship, our company will Free parts replacement;
- If you need to repair product parts, please notify in advance and give a reasonable repair time. The cost of returning the product must be borne by the customer, Mingao Technology does not accept cash on delivery. Mingao Technology will bear the transportation costs of new maintenance parts or products;
- This warranty does not apply to the following situations: failure damage of product parts due to accident, misuse, lack of proper maintenance, negligence, wrong adjustment, alteration, modification of vehicle mechanical condition, road hazard, overloading, failure to follow operating instructions or natural causes (such as weather, lightning, flood);
- The responsibility of Mingao Technology's guarantee is limited to the repair and replacement of faulty parts during the guarantee period:

Mingao Technology shall not be responsible for the accompanying or consequential expenses or losses.

1.3 Precautions

- Mingao Technology recommends that the product be inspected at least once every six months, and necessary maintenance should be done. For detailed maintenance steps, please refer to the maintenance instructions;
- There are strict specifications for product design and manufacture. Modifications to any aspect of the product are dangerous;
- The warranty will be void if: any changes are made to the original design of the product without the written authorization of Mingao Welfare Technology;
- Mingao Technology is not responsible for any personal injury or property loss caused by the use of modified Mingao Technology products. Without the written authorization of Mingao Technology, no individual or company can change the design of the product.

Notice

Please do not change the design of the product without authorization, otherwise it will directly affect your enjoyment of after-sales service!

2、Product Structure and Labeling

2.1. Product Structure Introduction

Serial number	Name	Describe
1	Institution ontology	The welcab seat mechanism body can realize movement, rotation and descent
2	Controller	Controls the speed and direction of the wheelchair. Push to move and release to stop.
3	Adjustment switch	Control ventilation, heating and massage on seats
4	Hand switch	Can be used for programming, operation, transfer and backup between program and controller
5	Pedals	Ccollapsible,for placing the feet
6	Adjustment switch	Can be used to adjust the backrest angle and leg support
7	Rear controller	Control the forward and backward direction of the wheelchair from the back

2.2. Product Identification Description

When the product leaves the factory, it will have a unique number for identification, and the label will be attached to the rotating motor. As shown in the figure:

3、 Normal operating mode

Notice

In normal operation mode, the wheelchair is installed and rotated in and out according to the programmed route set by the user; do not use the wheelchair on a slope.

3.1. Hand Switch Screen Icons Overview

Door indicator icon; when the door is open, this icon will be displayed, when this icon disappears, it means that the door has been closed and the seat cannot be swung out.

3.2. Description of Handheld Switch Buttons

Notice

The button adopts the operation mode of pressing and stopping; When the button is operable, the corresponding button indicator light will be green; In this manual, the right-handed seat is used as a reference for description, and the actions of keys 2 and 4 of the left-handed mechanism are reversed.

When the door is opened:

2: Swivel out the seat 4: Screw in the seat

When the doors are closed:

1: Move the seat forward 2: Inoperable
3: Move the seat back 4: Cannot operate

3.3. Switch Chinese and English

Hold down the "R" key
for 5 seconds

After jumping out of the password
input interface, enter: 1111

It will automatically jump into the
English interface as shown in the
figure

3.4. Automatic entry and exit operation

- When the wheelchair automatic rotation program starts, the wheelchair will run according to the preset programmed route;
- When the wheelchair is rotated in, it will execute the reverse procedure to rotate in. When the wheelchair is fully rotated in, it will automatically return to the front and back position before the last rotation out procedure was executed (i.e., automatically return to the user's "comfortable position").

Notice

This function requires the door to be open, otherwise the swing-out and swing-in functions will not be available.

3.5. Adjusting the seat forward and backward

- This function will be disabled when the seat is activated in or out procedure;
- The user can only freely adjust the front and rear positions of the seat only after the seat is fully screwed in;

Button 1 moves the seat forward;
Button 3 moves the seat backwards.

3.6. Adjust the wheelchair backrest and leg rest angle

- Users can freely adjust the wheelchair backrest and leg rest angles;
- The user can also adjust the wheelchair backrest forward and backward and the leg support up and down through the two-phase switch button on the right side of the wheelchair;

Backrest
adjustment
button

Leg rest
adjustment
buttonn

3.7. Manual operation mode

The user can use the handheld handle to enter the manual operation mode.

The manual operation mode has two main functions:

- In an emergency, you can manually operate every movement of the wheelchair, and the wheelchair will no longer run according to the specified programming route;
- In an emergency, when the wheelchair program is messed up, manually operating the wheelchair to return to the initial programming position can recalibrate the wheelchair program;
- If the user needs to reprogram the wheelchair path, the manual mode must also be used to return the wheelchair to the initial programming position.

3.7.1 How to enter manual mode

Hold down the "R" key
for 5 seconds

After jumping out of the password
input interface, enter: 1112

Manual mode main interface

3.7.2 Menu in manual mode

6 menu interfaces, buttons 1 and 3 can switch menus

Seat swivel

"2" key, the seat is screwed out; "4" key, the seat is screwed in;

Seat front and rear adjustment

"2" key, the seat moves forward; "4" key, the seat moves backward;

Extension and retraction of wheelchair lifting motor

"2" key, wheelchair extends; "4" key, wheelchair retracts*Note: When descending in this mode, the translation motor should be extended first, and then the lifting motor; when retracting, the lifting motor should be retracted first, and then the translation motor; (This operation process should be strictly performed in the above order, otherwise it will affect the normal use of the mechanism)

Upper level translation motor extends and retracts

Press the "2" key to extend; press the "4" key to retract. (This process must be coordinated with the extension and retraction of the lifting motor above. Do not operate alone, otherwise it will affect the normal use of the mechanism.)

Wheel retracting

Wheelchair retractable wheels, extend and retract. Press "2" to extend; press "4" to retract.

*Note: When the wheelchair is extended or retracted, the wheelchair pedal is about 30 cm from the ground. When retracting the wheels, pay attention to the vehicle pedal to prevent scratches.

Exit directly

Operate each movement of the seat independently, and return the seat to the programmed position in manual mode and calibrate it before exiting;

3.7.3 Use manual mode in emergency

For example, when using the manual mode to operate the seat alone, the seat will deviate from the original programmed route. The most logical thing to do is to return the seat to the programmed position and calibrate in manual mode.

4、 Hibernation mode

- Door control icon on hand switch screen when car door is closed  will disappear;
- When the door is closed and the wheelchair is not adjusted, the wheelchair will enter sleep mode and low power consumption mode after 30 seconds;

5、 Manual emergency operation

Notice

When the seat is unscrewed out of the vehicle, if the vehicle or the electrical components of the seat fail suddenly, the seat can be retracted into the vehicle through manual emergency operation; Please operate under the guidance of the company's technical staff. Do not operate privately to avoid damaging the parts! When this happens, the vehicle should be sent to the maintenance point for maintenance in time to avoid more serious accidents;

When this product provides temporary manual emergency operation, it needs to operate 4 mechanisms to achieve:

5.1. Product drop and lift

5.2. Contraction and extension of upper translation

First remove the four bolts of the translation motor, take out the motor, then install the 6mm socket on the quick wrench, and finally insert the rotating shaft at the tail of the translation motor:

Rotate clockwise, the mechanism moves backward;
Rotate counterclockwise, the mechanism moves forward.

⚠ Note: For manual emergency adjustment, when this layer is displaced, the motor must be taken out first, otherwise direct rotation will damage the internal parts of the motor.
When retracting the lifting and extending motors and the translation motor, retract the lifting and extending motor first and then the translation motor.

5.3. Screwing the rotating motor in and out

Use a 12 mm open-end wrench to loosen the bottom bolt, then pull the fixing bracket outward to disengage the gear from the rack, and then you can rotate the wheelchair manually.

5.4. The forward and backward movement of the bottom longitudinal motor

Unscrew the four bolts of the longitudinal motor and remove the motor, Install the 6mm socket on the quick wrench, Insert the rotating shaft at the tail of the motor:

Rotate clockwise to move the mechanism forward; rotate counterclockwise to move the mechanism backward.

Note: For manual emergency adjustment, when this layer is displaced, the motor must be taken out first, otherwise direct rotation will damage the internal parts of the motor.

6、Daily maintenance

Notice

Regular maintenance of the seat will maximize the performance of the product and reduce the number of repairs.

The seat products should be cleaned and maintained regularly to prevent the dirt in the car from falling into the seat mechanism, causing jamming and damage to the mechanism. It is recommended to clean and maintain at least once a month.

6.1. Wheelchair maintenance

The daily maintenance of the seat mechanism is mainly reflected in the lubrication of the mechanism, and checking whether each connection point and harness interface is loose or falling off. It is recommended to lubricate and inspect at least once every 6 months. The lubrication and inspection points include the following:

7、 Fault diagnosis and troubleshooting

Notice

When the wheelchair fails, the fault code will be displayed on the display screen of the handheld handle. Technical service or users can diagnose and repair the fault point based on the information.

7. 1. Transmission error

This message indicates a loss of communication between the hand switch and the seating system.

Possible cause: The wiring between the controller and the hand switch is disconnected, and the controller is faulty.

How to repair: Check whether the communication line is damaged, or try to replace the controller. After repairing, this fault message will disappear automatically.

7. 2. Motor current protect

This information indicates that the motor's operating current exceeds the set threshold. The interface will display the current running motor and running direction.

- **Rotating motor overcurrent protection (including screw-in, screw-out)**

- **Overcurrent protection for lifting motor (including extension and retraction)**

Possible reasons: The motor is blocked by an obstacle, the seat is locked, or the motor is short-circuited, or the encoder is wrong.

How to fix it: Remove obstacles check the seat lock status, re-enter manual mode for correction (refer to Chapter 3.7), and check if the motor wire is damaged.

- Front and rear motor overcurrent protection (including forward and backward)

- Translation motor overcurrent protection (including forward and backward movement)

- Hoist motor overload

Possible reasons: The motor is blocked by an obstacle, the seat is locked, or the motor is short-circuited, or the encoder is wrong

How to fix it: Remove obstacles, check seat lock status, re-enter manual mode for calibration (refer to chapter 3.7), check motor wires for damage.

How to fix it: Make sure there are no obstructions and try again with an empty seat. If the fault persists, please contact the installation technician

7. 3. Motor wire short circuit to ground

Possible reasons: The motor wire is damaged or the motor body is faulty.

How to fix it: Check the motor wires, replace the motor.

7. 4. Motor coding error

Motor encoding error means that the controller cannot receive the pulse feedback from the motor.

- Rotating motor coding error (including screwing in, screwing out)

- Extended motor code error (including extend, retract)

Possible reasons: The motor power cable is disconnected and the motor encoder cable is disconnected.

How to fix it: Check the motor power cable and motor encoder wiring.

- Front and rear motor coding error (including forward and backward movement)

- Translation motor coding error (including forward and backward movement)

Possible reasons: The motor power cable is disconnected and the motor encoder cable is disconnected.

How to fix it: Check the motor power cable and motor encoder wiring.

7. 5. The wheelchair has not returned to the origin

Possible reasons: The door control line is disconnected or has poor contact when or after the wheelchair is rotated out.

How to fix it: Check whether the door control line is disconnected or poorly connected

7. 6. Very low voltage error

When the voltage of the car battery is lower than 10.5V, this error will be displayed. At this time, the seat will prohibit all actions until the detected battery voltage exceeds 10.5V. The current actual voltage of the battery will be displayed on the screen (such as "9.4V")

Possible reasons: The battery voltage is too low

How to fix it: Re-enter manual mode for calibration. Check home position sensor.
